Heimgard

Next generation smart home!

Completely flexible. Completely secure.

Table of contents

Electronic door lock

Open the door with your fingerprint, a code, a RFID chip or the app.

Energy management

Save money and energy without compromising on comfort.

Indoor climate and lighting

Smart control of lighting and heating saves money and creates atmosphere.

Home protection and alarm

Keep your home safe with our range of sensors, alarms and security cameras.

Full control with the tip of your finger

The Heimgard Smart Mesh is so much more than great Wi-Fi.

It's also a smart home hub, allowing you to connect an extensive catalogue of Heimgard products, and a wide range of products from other leading brands, like Google, Samsung and Ikea, giving you full control of your home through our easy-to-use app.

Home comfort

Take control of your indoor environment and automate everything from room temperature and air humidity, to ambient lighting and morning routines, reducing friction in your everyday life!

Use the app to dim down lights and adjust the floor heating in the hallway. Or power up the coffee maker in the kitchen on a scheduled time. Program a scene containing several actions and address it to a wall switch for easy access.

The possibilities are practically endless. And since we have built our smart home solution using the open Zigbee standard, you can use a wide range of smart home sensors and devices from various brands, allowing you to create your smart home, your way.

Remote heating

There is nothing better than entering your perfectly tempered vacation home after a long journey. Just tap your phone to turn up the heat, in time for your arrival.

Heimgard's mobile broadband hub is smart and comes with great Wi-Fi, allowing you to take control of your panel ovens and floor heating through an easy-to-use app. Use your phone to manually turn up the heat in the bathroom, make a schedule for your heaters to kick in every weekend, or set a rule for your heaters to turn on when the temperature drops, ensuring your pipes never burst.

Home security and alarm

With Heimgard's flexible and smart alarm system, you can sleep safely, knowing that your home and family are always protected.

With Heimgard's range of security cameras, sensors, door locks, and detectors, all connected and managed through our highly secure smart mesh and app with instant notifications, you will feel well protected. Our solution removes the middleman, allowing you to have a security partner on call-out, only when you need the extra safety, saving you money.

Energy saving

Collect energy data and make informed decisions on how to manage your power consumption by adding automation and intelligent, behaviour-driven energy saving services to your home.

With ever increasing energy costs, the value of smart energy management is critical. Heimgard's app and connected devices enable you to monitor and manage your energy consumption, saving you energy and money without sacrificing comfort.

You can even set threshold levels to autonomously turn off utilities, according to your priority, when your energy peak limits are reached.

And with our energy storage system, we enable time-shift and peak shaving, allowing households to save money by storing energy when costs are low, and using it when energy costs rise.

Keyless entrance

With our range of smart door locks, you can simply open the door with your fingerprint, a code, or remotely through the app.

Go for a run without your keys jangling in your pocket, and send your kids to school knowing that they will never forget their keys again. You can even give access to the plumber who is fixing your kitchen sink while you're away.

Our smart door locks allow for both pin code, RFID, and fingerprint access. You can also link your door lock to deactivate your alarm system when punching your code, creating a seamless user experience.

Smart home done the right way!

With our highly secure Wi-Fi 6 mesh network with a built-in smart home hub, we are lowering the threshold and redefining the entry point for every home to be smart.

It comes with a wide range of services, great customer support and with Heimgard's extensive product catalogue to satisfy the next generation home owners.

It´s built on the open Zigbee platform to support a wide range of smart brands, allowing users to build their smart home, their way!

It all starts with great Wi-Fi!

Developed in Norway, Heimgard is a flexible and secure connected home solution that cares about your privacy. And it all starts with great Wi-Fi.

Great coverage

With the Heimgard Wi-Fi 6 Smart Mesh router, you have a robust Wi-Fi solution that can handle the growing number of devices and the increase in data traffic, and at the same time provide strong signal throughout the house with up to 750m2 coverage.

The game changer!

The Heimgard Wi-Fi Smart Mesh router comes with a Smart Home Hub already built in. Its paired to your phone, and controlled by an app, for easy and secure access.

With Heimgard´s extensive product lineup covering most of your customers needs, now you can take control of your lighting, heating, alarms, security cameras and much more. But it gets even better...

Your smart home, your way!

Heimgard is an open ecosystem, built on the Zigbee standards, allowing you to pick and choose components from a wide range of smart products from some of the best suppliers in the market, growing your connected home solution, just the way you want it.

We support you

The Heimgard Wi-Fi Smart Mesh router is paired to your phone with a secure connection, allowing for easy installation and handover.

And since we are all Nordic, you will always meet a friendly and familiar language when calling our customer support.

Completely Secure

Privacy is extremely important to us at Heimgard. That's why we never collect or store any data on our users - all data is stored securely and locally with you. We do not use a username or password, but a personal encryption key, connecting your phone to your hub so no private data can get lost.

We are the result of a merger between three established Nordic technology companies, making Heimgard Technologies the largest Nordic developer of connected home solutions.

Every home can be smart, and we are here to make it happen.

We bring value into peoples lives through merging technology with great services.

Security at the gateway

The way to break into a home is no longer just through the front door. It is now through the home broadband gateway. Full protection at the gateway, powered by F - Secure, keeps your increasingly connected home and family protected and safe from viruses, trojans, spyware, and ransomware.

With browsing, malware and tracking protection, advertisers are unable to track you, keeping you anonymous online. It also protects your online identity with monitoring and breach alerts when using smart home device cloud services. What's more, by minimising security impact on your broadband, hyper speed connectivity is achieved.

The easy-to-use app enables you to set healthy boundaries for children, blocking harmful content and setting internet breaks when needed, protecting your family in more ways than one!

Surf from home, anywhere!

Bring the security of your home network with you when surfing on public networks, and get access to your regional content and personal services when abroad.

With a tap in the app, all apps and browsing will be communicating to the internet from your home, not from your current location, and all communication will be encrypted and secured, keeping you protected when on an unsafe network.

Surf from home will bypass local restrictions and present an online world that users are familiar with, so the functionality and language of all apps and content will be just as it normally is at home!

No more traffic jams

Not all traffic in the home has equal importance. With Heimgard´s intelligent Wi-Fi Slicing technology, allowing you to select the priority of the content, you will ensure your important video calls go without a hitch.

Heimgard AI makes use of advanced machine learning algorithms to optimize your Wi-Fi based on apps and user profiles, allowing you to set traffic priority.

Our system automatically and autonomously reacts when an application starts, instantly working to ensure it performs as expected, ensuring the highest possible quality of user experience for all scenarios.

Home networking

More than just great Wi-Fi!

Heimgard´s revolutionary Wi-Fi 6 smart mesh system has a smart home hub built in. It runs on the Zigbee platform, allowing you to build your smart home, your way!
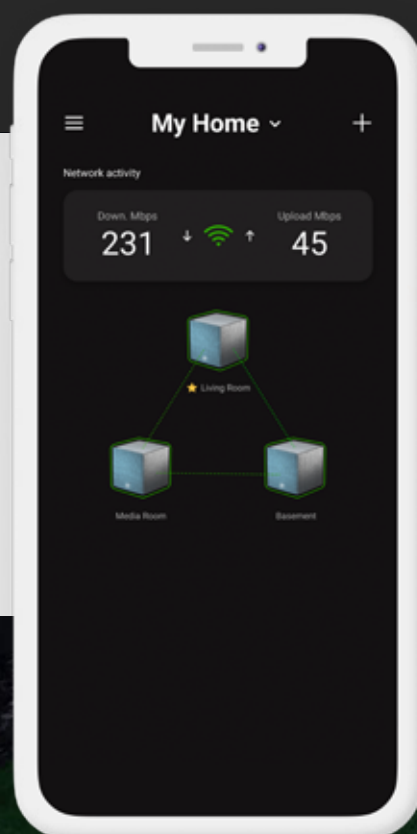

Our solution supports a wide range of smart brands, with the Heimgard apps allowing for easy installation and an effortless handover!

Smart locks for apartment buildings

The Heimgard key to unlock lower costs

You might not know this, but the main front door of your apartment building is an obstacle that is costing you money.

Whether it´s letting in a family member or the plumber, a resident must either leave the key under the door mat, jeopardizing security, or arrange with the janitor to spend his valuable time to give the visitor access.

Physical keys are also often lost, with the cost and hassle of replacing them falling on building management. A few replacement keys may not be a big expense but how many lost keys do you allow before replacing the main lock, meaning cutting new keys for every apartment. Now multiply this by the number of apartment buildings you manage, and the cost is substantial.

No keys to replace

Unloc´s state of the art solution replaces the physical lock and key with the world´s most easy-to-use digital, encrypted keys. Through the Unloc app, a digital key can be shared with any relative or tradesperson that needs to be let in.
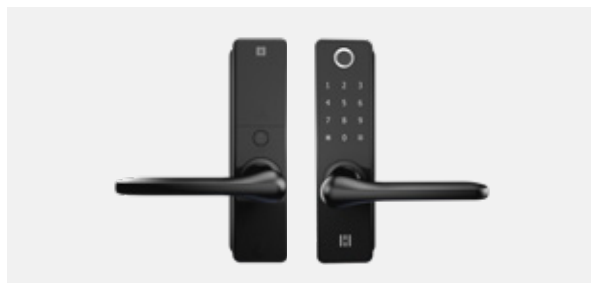

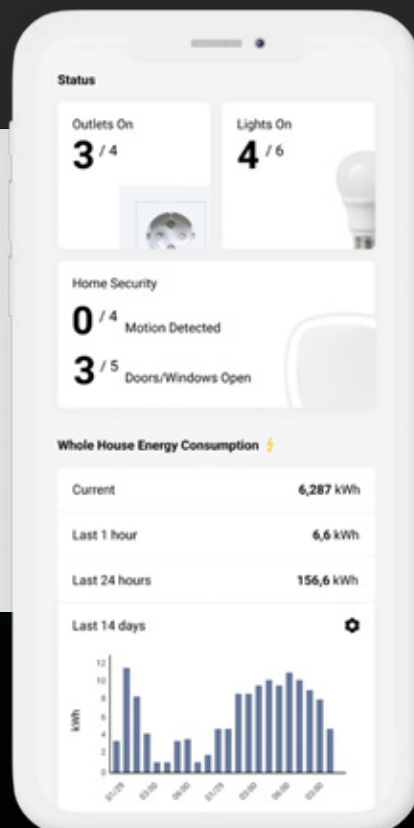

With no key to lose, you never have to replace a key again, saving you time and money.

Residents no longer need to hide keys under the doormat, strengthening security, with the system logging exactly who has entered the building and when. Users also set the conditions of the key, enabling the key to be used only once or multiple times before it disappears.

By implementing smart technology in your building and apartments, you are adding value for the people living there, creating a safer environment, and saving key management and janitor costs.

A complete smart home solution for apartments and homes

Heimgard provides a full smart home solution for apartments, including smart door locks. So, to create a more seamless user experience and add value for our shared customers, we are collaborating with Unloc – the official keyless front door provider for OBOS – Norway's largest housing developer.

Energy management

Take control of your energy bill.

Monitor energy data and make informed decisions on how to manage your energy consumption by adding automation and intelligent, behaviour-driven energy saving services to your home.

The Heimgard app enables you to monitor and manage your energy consumption, saving you money without sacrificing comfort.
